

Supplementary figures

Supplementary figures to <https://doi.org/10.1016/j.intimp.2020.106705>

Suppl. fig. 1: Scatter plots corresponding to the top four features of patients not admitted to hospital (community); categorized by whether tested positive (red) or negative (blue) to rt-PCR SARS-CoV-2 test. Dark colours represent averages and error covariance ellipses correspond to 1 standard deviation.

Suppl. fig. 2: Scatter plots corresponding to the top four features of patients admitted to hospital (regular ward); categorized by whether tested positive (red) or negative (blue) to rt-PCR SARS-CoV-2 test. Dark colours represent averages and error covariance ellipses correspond to 1 standard deviation. MPV; mean platelet volume, RBC; red blood cells.

Suppl. fig. 3: Profile of Red Blood Cells and Platelets from patients in Regular Wards testing positive (red dot) or negative (blue dot) to rt-PCR for SARS-CoV-2. The difference in means; RBC; red blood cells, RBC DW; red blood cell distribution width, MPV; mean platelet volume.
